1.1 SOLOMON STANDARD TFT MODULES

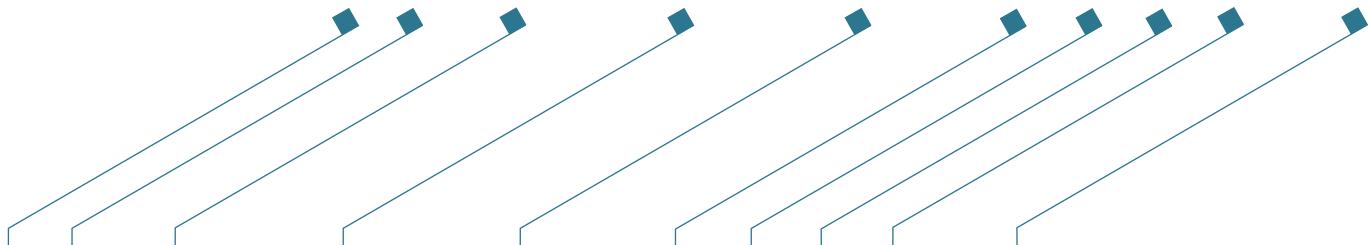

Solomon Goldentek Display (SGD) started up more than 20 years ago as a subsidiary of the Taiwan semiconductor group Solomon Technology Corporation. SGD specialises in extremely high-quality TFT modules in the range 3.5 to 8.0 inches. Modules that are particularly suitable for industrial applications.

Compared to the products of other market players SGD products are characterised by the fact that all sizes are available in high bright and ultra high bright versions. With a 5 year operational guarantee on workmanship and interface, SGD has an excellent market position. Standard for all models are the resistive touch panel and LVDS interface. The FPCs and PCBs can be designed in accordance with customer wishes. As an additional highlight, back-light drivers are available as standard for many TFT modules.

Overview of the advantages of Solomon Goldentek Display (SGD) TFT modules:

- » Modules compatible with Japanese standards
- » Touch panels available for all modules
- » LVDS interface available as standard
- » Customizing of FPCs and PCBs
- » LED back-light drivers available as standard
- » Minimum back-light lifetime of up to 50,000 hours
- » Modules available in high bright and ultra high bright versions
- » **5-year operational guarantee on workmanship and interface**

1.2 SOLOMON SUNLIGHT READABLE TFT MODULES

The excellent optical performance provided by the optical bonding technology as well as the cost advantages of the DBEF / low-reflection technology are remarkable. These modules are available in the sizes 3.5 to 8.0 inches. Sunlight readability is achieved by two different processes: coating with special polarising material and optical bonding. In general both technologies are used in SGD's production and can be applied for the sizes 3.5 to 8.0 inches. The excellent optical results of the optical bonding technology and the cost advantages of the DBEF / low-reflection technology are noteworthy. For these modules too SGD guarantees 5 years for workmanship and interface.

DBEF/Low-reflection technology

In connection with an extremely bright SGD back-light the sunlight readability of the TFT modules is improved by the use of a low-reflection polarizer. Furthermore the so-called DBEF back polarizer is used as standard for all ultra high bright TFT modules. As a result of this design, the degree of reflection is reduced significantly.

Optical Bonding

In the case of optical bonding, the TFT is bonded to a protective glass panel or outdoor touch panel by using a special gel. This process is by far the most effective in reducing reflection and is particularly suitable for hundred percent outdoor usage. Furthermore optical bonding prevents dust and condensation between the TFT and the protective glass panel or touch panel respectively.

TFT module without touch panel

Upper half of the picture: **without** DBEF / low-reflection polarizer
 Lower half of the picture: **with** DBEF / low-reflection polarizer

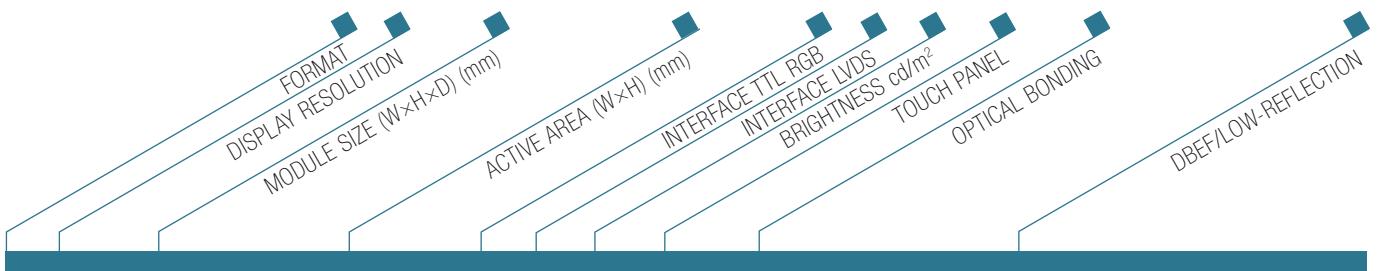

TFT module with four-wire resistive touch panel

Upper half of the picture: **without** optical bonding
 Lower half of the picture: **with** optical bonding

Overview of the advantages of the SGD sunlight readable TFT modules:

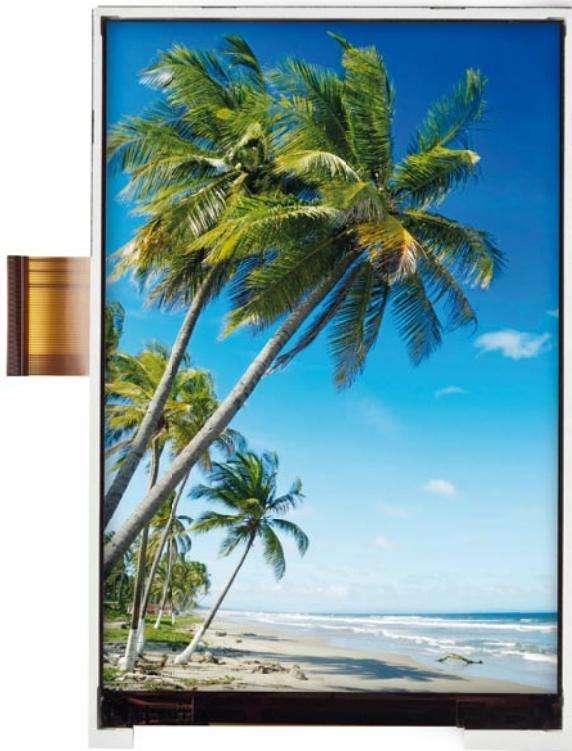

- » Both sunlight readable technologies are produced by SGD in-house.
- » Both processes are available for the TFT sizes of 3.5 to 8.0 inches.
- » The DEBF / low-reflection technology has a superb price/performance ratio.
- » **SGD's sunlight readable TFT modules also have a 5-year guarantee on workmanship and interface.**

2 MULTI-INNO TFT MODULES

Multi-Inno Technology Co., Ltd is a company specialising in TFT modules, which are produced in China. A high priority in the production of these models is cost optimization without any compromise on quality. By rapid adaptation of the TFT modules semi-customised solutions can be produced fast and cost effectively.

Through the extremely close cooperation between Endrich and Multi-Inno direct delivery in Asia and a complete support of the Asian FAE is possible at all times.

Overview of the advantages of Multi-Inno TFT modules:

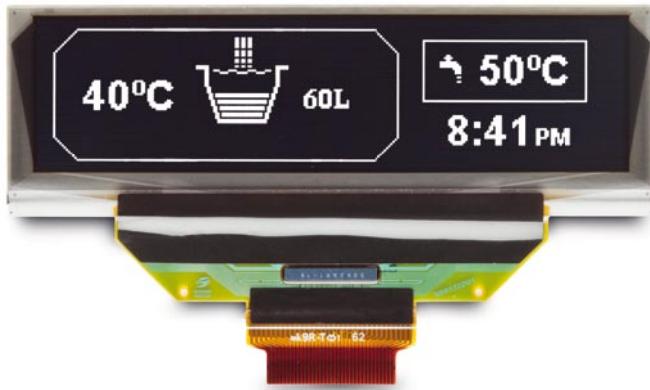

- » Cost-optimized TFT modules
- » Semi-customized TFT adaptations
- » Excellent FAE / design-in support of production facilities in Asia

3.1 MONOCHROME GRAPHIC OLED

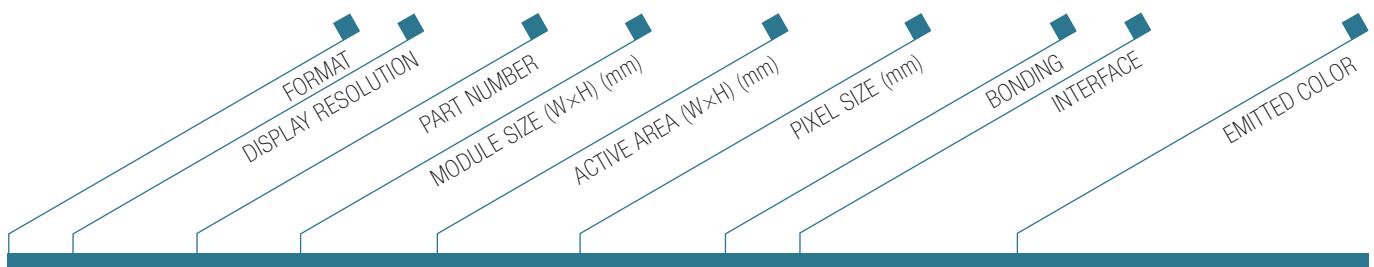

In the past 10 years RiTdisplay Corp. has grown to a world market leader for passive OLED displays. The spectrum of these products extends from monochrome to full colour OLEDs. As a unique product highlight RiTdisplay produces as the only supplier in the world OLED displays with an integrated capacitive touch panel.

Special optical qualities of the OLED displays are an extremely high contrast of 2000:1 and an unusually wide viewing angle of 160°. Most of the displays have in addition to the 8-bit parallel interface an SPI and I²C interface.

The monochrome OLED displays are supplied in the sizes 0.7 to 3.2 inches with a maximum resolution of 256x64 pixels.

In many applications, monochrome OLED displays replace standard LC modules. The user gets the benefit of much improved optical performance, in short a greatly improved final product.

3.2 FULL-COLOR GRAPHIC OLED

Full colour OLED displays are supplied in the sizes 1.0 to 1.8 inches. They are particularly suitable as replacements for small TFT modules or CSTN displays. The typical lifetime of these OLED displays is approximately 20,000 hours.

Full colour OLED displays with capacitive touch panel are currently available as a standard product. The capacitive touch panels are produced in-house by RiTdisplay and can be adapted according to customer wishes to all other OLED sizes.

3.3 MONOCHROME ALPHANUMERIC OLED

Raystar Optronics was established in Taiwan in 2007.

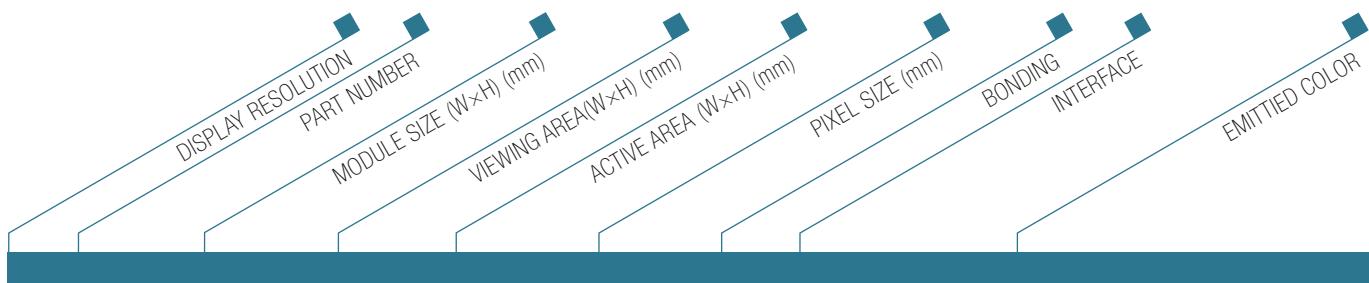

Raystar specialises in the production of standard alphanumeric and graphic OLED displays as well as monochrome LC modules. In the last few years Raystar has succeeded in making a name in the Taiwan market as an OLED panel manufacturer.

Raystar alphanumeric OLED displays

- » Mechanically and electrically compatible with alphanumeric LC displays
- » Sunlight readable technology available

Typical lifetime at 80 cd/m²

- » yellow: 100,000 hours
- » red: 100,000 hours
- » green: 100,000 hours
- » white: 50,000 hours
- » blue: 50,000 hours

4.1 CUSTOMIZED LC-MODULES

One of Endrich's core competences is implementing customised displays. We guarantee our customers individual support during the development of LCDs matching their specific requirements. On the basis of our specialised know-how and years of experience we can offer our customers the best and most cost-effective products for meeting their requirements. On the basis of a wide range of technologies Endrich supplies solutions for industry, audio, telecommunications, medical or automotive applications.

Display components:

Most important for an optimal appearance is matching in detail the individual components, for example, liquid crystals, polarizers, controllers and back-lights. Endrich provides active support for its customers when choosing components to develop an attractive and innovative display for the application in question.

Available technologies:

- » LCD glass: TN, HTN, STN, DSTN, FSTN, Enhanced FSTN, Super White FSTN, DFSTN, IBN, Black Mask, Black Mask Color Ink Print
- » Max.working temperature: -40°C ... +85°C
- » IC Bonding: COB, COG, TAB
- » LCD Backlight: LED, EL, CCFL, Lightguide
- » Touch Panel: capacitive and resistive technologies
- » Contacting: FFC, FPC, heat sealing, pins, conducting rubber
- » Certifications: ISO 9001, ISO 14001, ISO/TS 16949

4.2 CUSTOMIZED SOLUTIONS

Special LC technologies:

IBN (Improved Black Nematic)

IBN technology has been designed for segment displays. The extremely high contrast – typical values are 500:1 – is unique for monochrome displays.

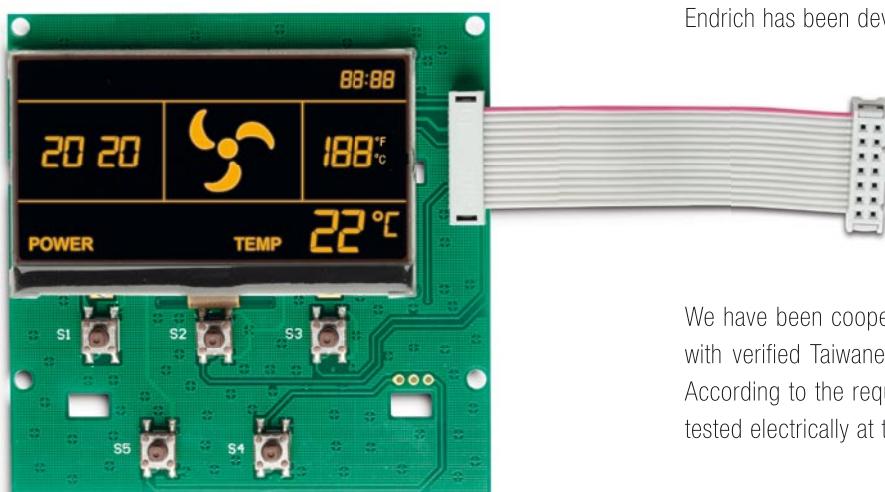

Technical features

- » LCD type: Segment display
- » Max.operating temp.: -30°C ... +85°C
- » IC Bonding: COB, COG
- » LCD Backlight: LED
- » Contacting: FFC, FPC, Heatseal, Pins
- » Special features: Contrast typically 500:1

Complete solutions:

LC module, PCB, push-button, customized cable

Endrich has been developing total solutions for many years.

We have been cooperating for a considerable number of years with verified Taiwanese suppliers in sourcing the components. According to the requirements of the customer each module is tested electrically at the supplier.

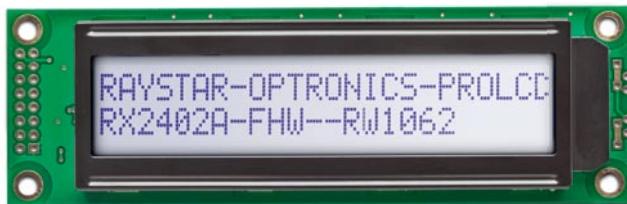

Fixing displays mechanically

For customer-specific modules fixing the display mechanically to the PCB assumes greater and greater importance. Cost-effective solutions are obtained using modules with plastic hooks, which we develop according customer requirements.

This solution saves time in production in comparison with screwing or adhesive fixing.

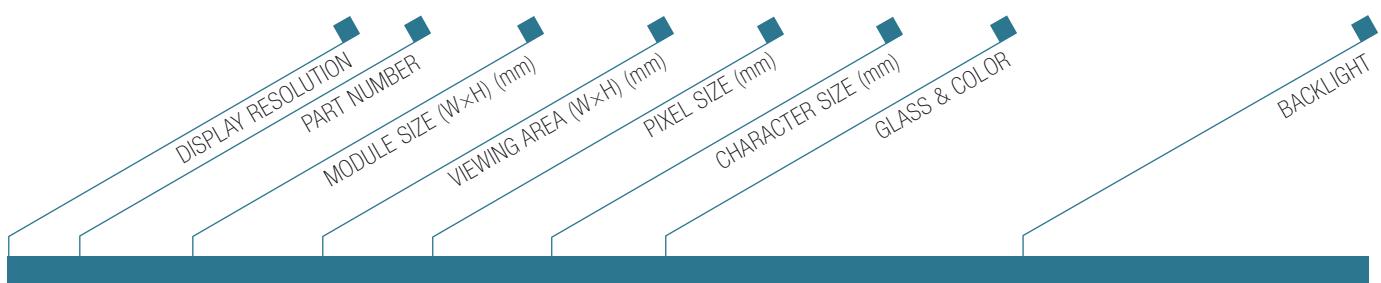

5.1 STANDARD ALPHANUMERIC LC-MODULES

Raystar Optronics has an extremely comprehensive production program of graphic and alphanumeric displays. The program covers a wide range of sizes, technologies and back-light colours for the various modules.

Should a particular required display not be part of our standard program we can develop this according to a customer's requirements.

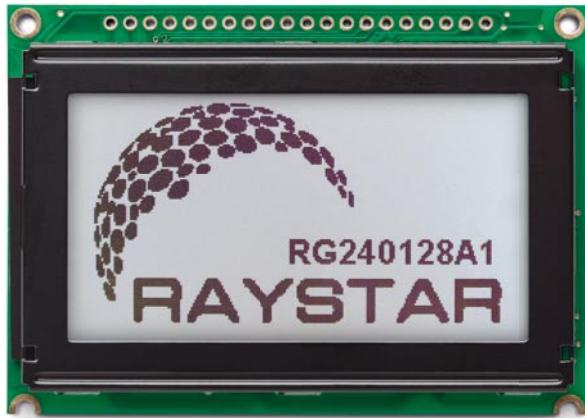

The Raystar alphanumeric displays are supplied for 8 x 2 to 40 x 4 characters. For every size of display there is a number of different character sets, LC technologies and backlight colours.

5.2 STANDARD GRAPHIC LC-MODULES (COB)

Chip on board (COB) LC modules are available as standard products in resolutions of 122 x 32 to 320 x 240 pixels. The LC module is fixed to a PCB which includes also the controller. Various contact methods are available, e.g. FFC, pins or soldering lugs.

5.3 STANDARD GRAPHIC LC-MODULES (COG)

Chip on glass (COG) LC modules are available as standard products in resolutions of 16 x 2 characters to 320 x 240 pixels. The controller is bonded to the LCD glass. The advantages of COG compared to COB modules are a lower construction height and weight and a better shock resistance.

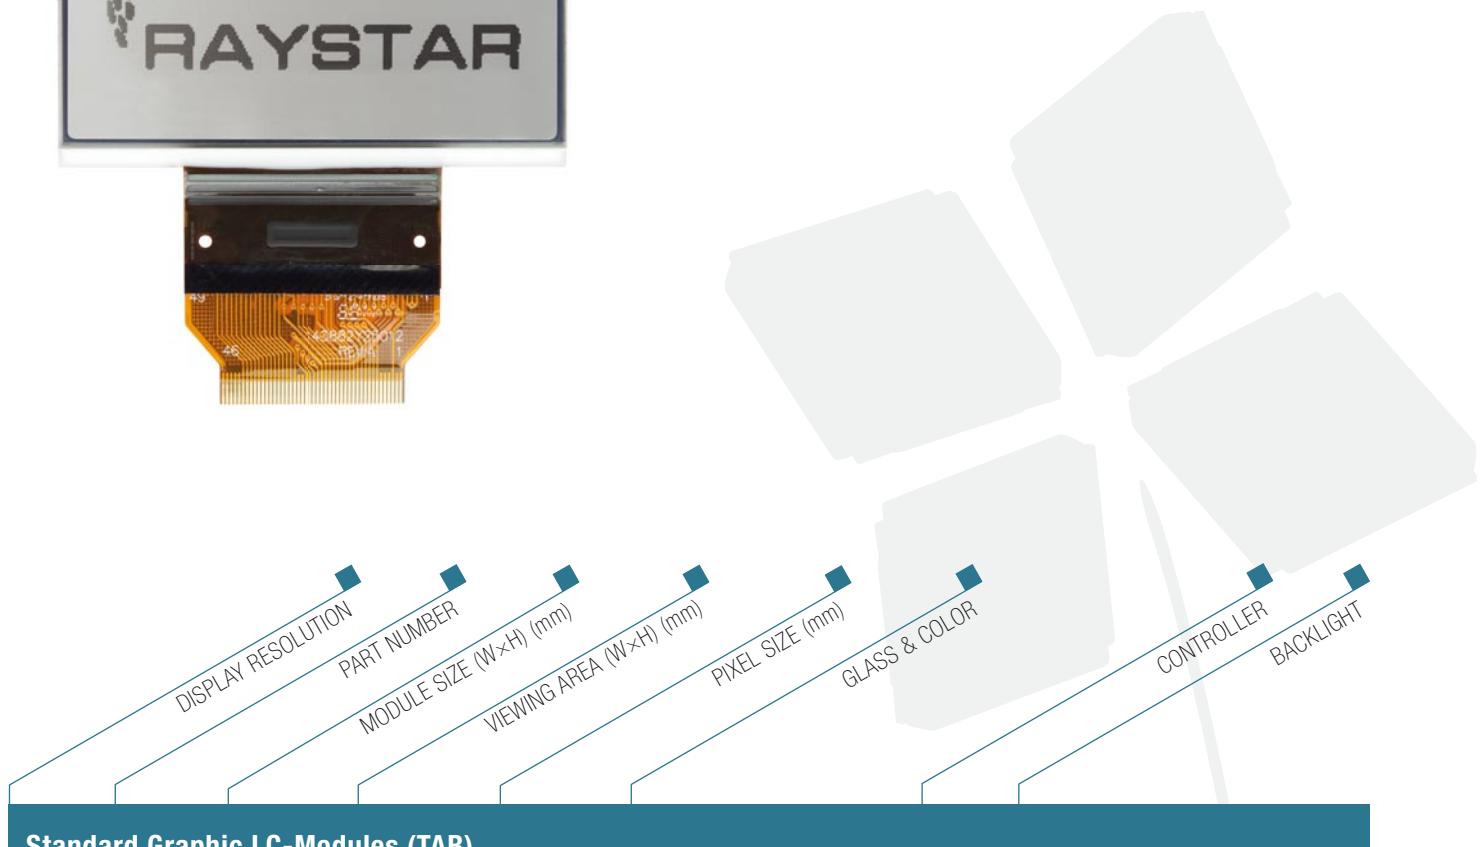

Standard Graphic LC-Modules (COG)

5.4 STANDARD GRAPHIC LC-MODULES (TAB)

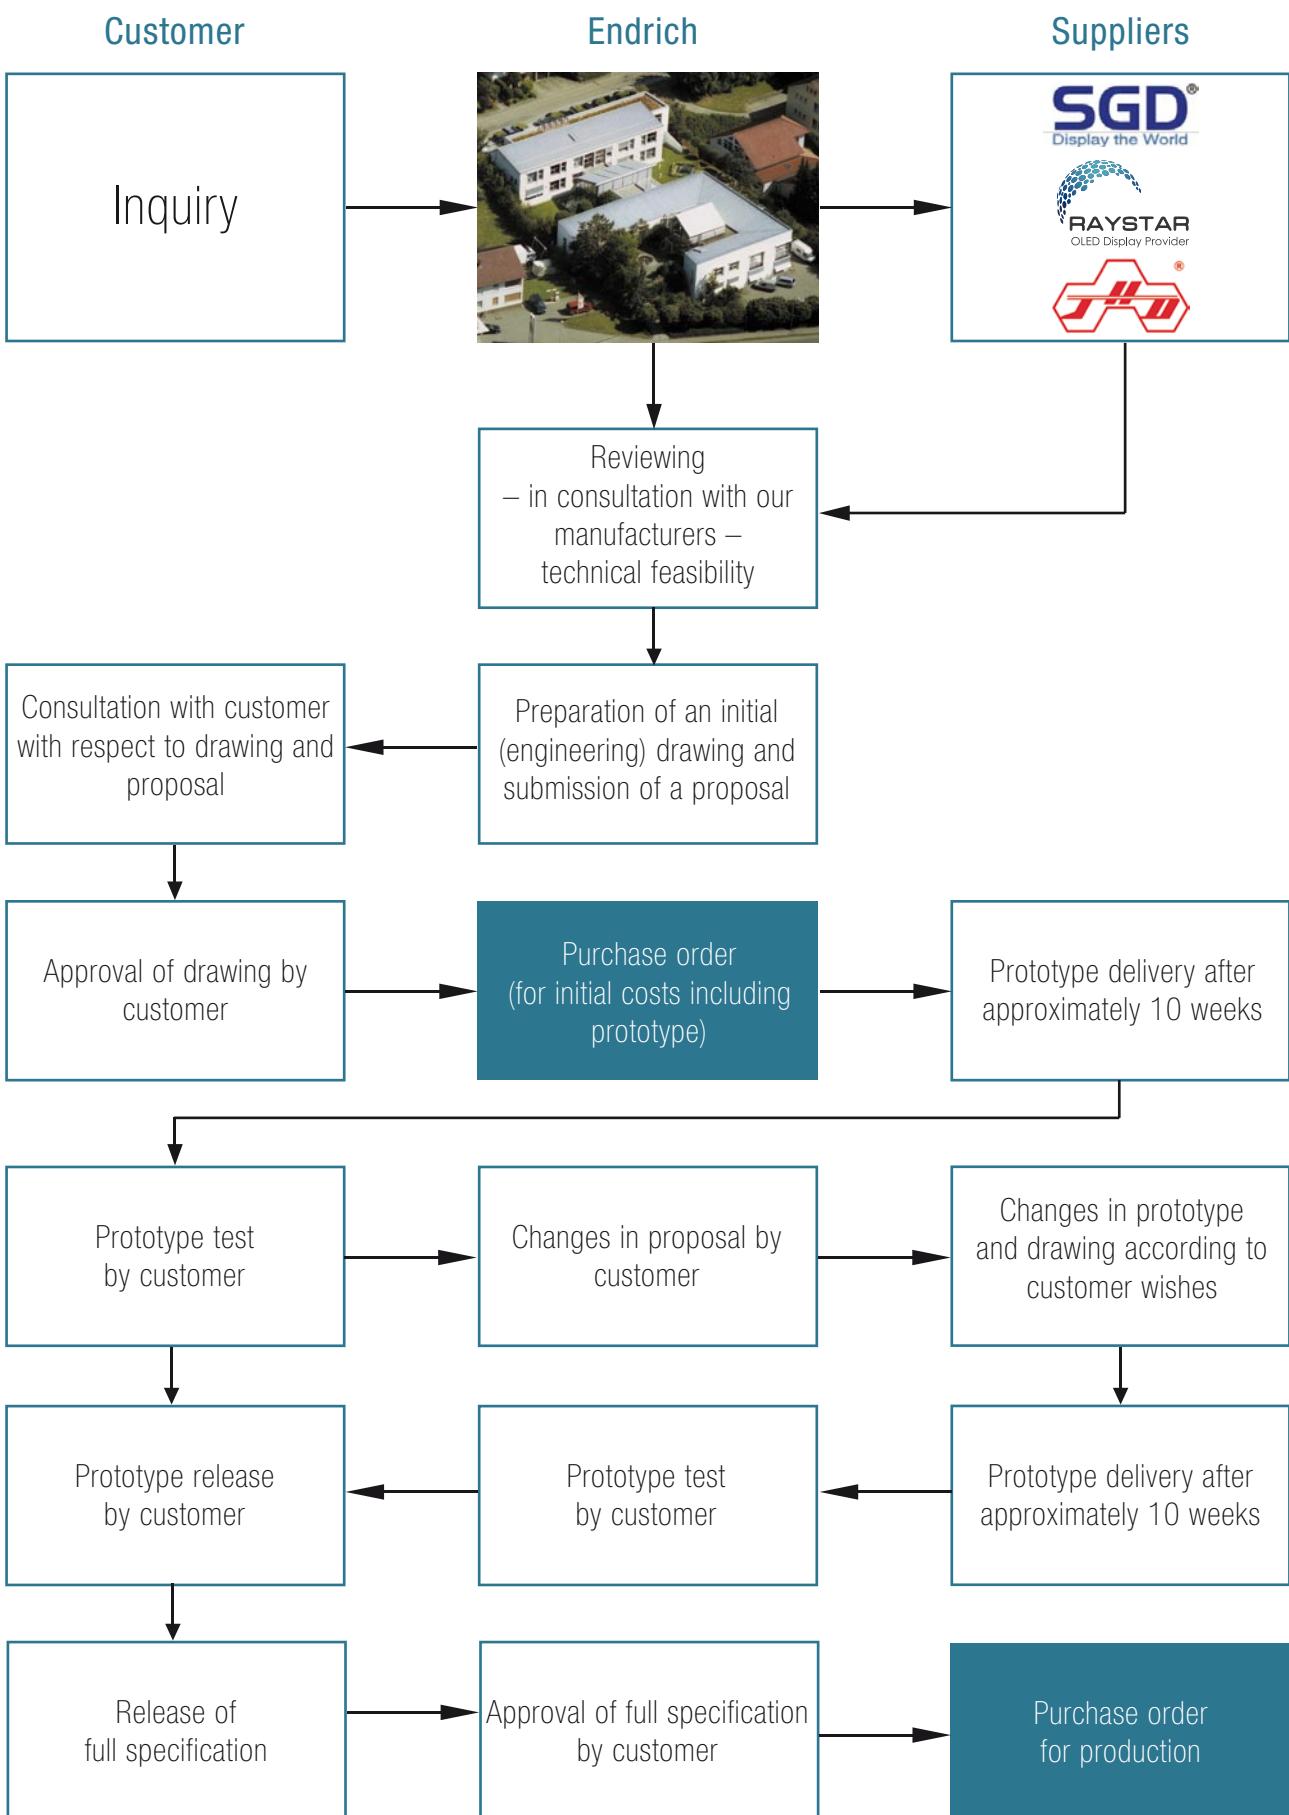

Tape automated bonding (TAB) LC modules are available in resolutions of 128 x 64 to 320 x 240 pixels. The controller is mounted on a TCP (tape carrier package). The TCP is connected with the ITO contacts on the LCD. TAB modules are extremely thin and require little space as the TCP can be folded down to the back of the LC module.

Standard Graphic LC-Modules (TAB)
